

INTRODUCTION

This document lists a range of products that have passed Standards testing in the NovitaTech Test Laboratory (formerly “Rehabilitation Engineering Equipment Testing Laboratory”). This document is intended as a summarising document only – the detailed test report is the official NATA endorsed document and should be considered to take precedence. The list only includes products tested to current Australian/International standards.

Only equipment that has been mechanically tested to a complete standard and can hence claim *FULL COMPLIANCE* are included in this document. Prior to 2022 – products that had full compliance with some minor conditions relating to documentation requirements may have also been included in this list. From January 2022 onwards, only products that completely meet all standard requirements that NovitaTech are able to assess are added to this list.

Please note: “FULL COMPLIANCE” of products on this list might exclude certain standard requirements that NovitaTech are unable to assess at their facility (and that are not on their NATA scope of accreditation: [NovitaTech Test Laboratory - Accredited Organisation \(Site No. 2946\) - NATA](#)).

Examples of test exclusions include: corrosion, rain effect, climatic storage, wheelchairs for use as seat in vehicle, biocompatibility, selected resistance to ignition tests, electromagnetic compatibility, materials and finishes and selected battery charger compliance tests.

The supplier/manufacturer may have had these requirements assessed by an alternative test facility. It is best to contact the supplier directly, who should be able to provide the test report as evidence that the product full complies to a standard. NovitaTech are unable to provide details of product test results to customers.

From January 2022, products are automatically listed after successful completion of testing, unless the manufacturer has given written request that their products not be included.

All enquiries about standards (ISO, AS/NZS, BS, IEC), testing, and accreditation should be directed to:
